

**CASTROSUA GROUP WILL EXHIBIT IN *BUSWORLD* ITS POTENTIAL IN THE URBAN AND INTERCITY BUS SECTORS THROUGH THE NEW CITY AND MAGNUS.E MODELS**

**Santiago de Compostela, 5th October, 2015.**-A Castrosua Group delegation headed by its president, Juan Luis Castro, will travel from the coming 16th to 21st October to the Belgian city of Kortrijk to participate in one of the most relevant buses and coaches sector trade fairs in Europe, *BUsworld*. Within the framework of this forum, the Galician coachbuilder will exhibit its potential in the urban and intercity sectors through the New City and Magnus.E models.

The New City bodywork is the Castrosua Group new commitment for urban transport. It was introduced to the national market in the last edition of FIAA and since then, these model units are already running in different Spanish cities such as Vigo and Gijón. *Busworld* is one of the most potent showcases of the sector; Castrosua Group will now present the New City to Europe. It is a bodywork designed to bring significant benefits to operators and users because it allows to modernize and improve the urban transport service by providing a more accessible, more comfortable and safer model.

In this product, modernity and technology come together to set up a bus with marked lines and an aesthetic with character. The New City, also stands out as a model to suit the needs of customers, with a great capacity for customization.

**Magnus.E bodywork in high floor**

On the other hand, Castrosua Group will also take the opportunity *Busworld* offers to strengthen its position in the field of medium distance. Thus, in *Busworld* 2015, Castrosua Group will also exhibit the Magnus.E bodywork in high floor with Compressed Natural Gas propulsion (CNG). Magnus.E is the Castrosua Group bodywork specially designed for passenger transport in cities and its surroundings.

The technical work to adapt the chassis to the high floor with CNG, developed by Castrosua Group, the pioneer in Europe and is a clear example of dedication to service and customer orientation of the Galician bodywork. This

technical development has successfully passed different and exhaustive quality controls and audits.

The Magnus.E allows passengers to improve their comfort in their trips, by providing more convenient, comfortable and accessible vehicles and at the same time respectful with the environment.
