PRESSRELEASE

VB-Airsuspension presents new full air suspension system for Mercedes-Benz Vito and Sprinter

2015, for VB-Airsuspension, is a year full of developments concerning air suspension for Mercedes-Benz. As of September, the company is offering both second-generation air suspension for the current Mercedes-Benz Sprinter and complete rear axle air suspension for the new Mercedes-Benz Vito and V-Class.

This year, Mercedes-Benz presented its new Vito and V-Class. Air suspension on the rear axle is no longer available ex works for these new vehicles. Therefore, VB-Airsuspension has developed an air suspension system for these vehicles. The newly developed VB-FullAir 2C-system delivers a constant ride height, increased comfort, optimum driveability, increased stability, reduced wear of tyres/brakes and lower CO2 emissions. The system also provides the option to lower the rear end of the vehicle: the so called “kneeling function”.

Mercedes-Benz Sprinter

Also the air suspension kit for the Sprinter has been optimized. This air suspension has been improved on several points compared to its predecessor from 2006. The shock absorbers and compressor box are modified and the new set comes standard with an air tank, which allows the vehicle to raise or lower faster.

Further development

The launch of these new sets is fully in line with the ambitions of VB-Airsuspension. The development of various types of suspension systems – from coil springs and semi air to full air – is very important for the company that is currently experiencing strong growth.

VB-Airsuspension is present at Busworld 2015 (stand R29), from 16 until October 21, where it will present its new developments.

Note for the editor

About VB-Airsuspension

Founded in 1993, VB-Airsuspension is one of the few European manufacturers producing such a wide range of air suspension systems. From coil springs and semi air suspension to full air suspension, we offer customers solutions for a range of applications such as light commercial vehicles, ambulances, car transporters and motorhomes. The head office is situated in Varseveld (Netherlands). The company has five subsidiaries in France, Germany, United Kingdom, Russia and the United States. VB-Airsuspension also has an extensive worldwide network of dealers and importers/distributors.
