

Bluebus selected by RATP for its fully electric 6-meter bus

In addition to the lot won with its fully electric 12-meter Bluebus under the RATP's so-called "massive" tender offer, **the Bolloré Group has been awarded the RATP contract for the supply of fully electric minibuses.**

This single-supplier contract for a term of 48 months consists in supplying fully electric 6-meter buses for a maximum amount of €10 million, without any minimum order requirement.

"We are delighted to have won the single-supplier framework contract for the 6-meter Bluebus. By selecting Bluebus, RATP has reasserted its trust in the Bolloré Group. We are happy and proud to continue to develop our partnership with RATP", announced Bluebus Chairman Jean-Luc Monfort.

These fully-electric buses are made in France, more precisely in the Bluebus and Blue Solutions plants at Ergué-Gabéric in Brittany. Indeed, the Bolloré Group's batteries (and cells), as well as its buses, are produced on the same industrial site, which means better control of manufacturing and integration quality, while also reducing transport-related CO2 emissions. **The 6-meter Bluebus has been awarded the "French origin guaranteed" label, for the bus component as well as the batteries.**

The Bluebus selected for this contract can hold up to 22 passengers and has an **operating range** of up to **180 kilometers, through three LMP®** (Lithium Metal Polymer) batteries. It serves city centers in an efficient, non-cumbersome way while respecting their environmental quality: no noise, no fumes, no CO₂ emissions.

About Bluebus

Bluebus is a French manufacturer of fully electric 6-meter and 12-meter buses. The Bolloré Group's electric buses are produced in the **ISO 9001 certified Bluebus plants of Quimper**, and **bear the "French origin guaranteed" label**. The buses are equipped with **LMP® (Lithium Metal Polymer)** batteries, fully produced in Quimper, in the Group's Blue Solutions plants, which also hold the **"French origin guaranteed" label**. This battery, unique in the world, contains **no solvent, no cobalt, and no rare earths**. Offering a clean and silent solution for urban and suburban public transport, the Bluebus range responds to current environmental challenges while combining high technology, design and performance. With over 300 Bluebuses currently in operation around the world, Bluebus provides a response to the changing mobility needs of today's and tomorrow's cities.
